

3.1 ServiceNow Environment

Phase 3 - System and Configuration Setup | Implement Client Script & UI Policy (Incident)

1. Environment Description

The project is implemented on a ServiceNow Personal Developer Instance (PDI). A PDI is a free, fully functional instance provided through the ServiceNow Developer Program, intended for learning, building and testing applications without affecting any production system.

Parameter	Details
Instance Type	Personal Developer Instance (PDI)
Instance URL format	https://devXXXXXX.service-now.com
Login Role	System Administrator (admin)
Application Scope	Global
Supported Browser	Google Chrome / Microsoft Edge / Mozilla Firefox
Interface	Next Experience / Core UI (Platform UI)

2. Access and Navigation

- Log in to the instance using admin credentials.
- Use the application navigator filter to search for modules such as Incident and Client Scripts.
- Client Scripts are located at **System Definition > Client Scripts**.
- UI Policies are located at **System UI > UI Policies**.

3. Suitability for the Project

The PDI provides the complete ITSM Incident Management application with the standard Incident table, form and roles, which makes it ideal for implementing and validating Client Script and UI Policy behaviour.
