

5.2 Purpose of the UI Policy

Phase 5 - UI Policy Implementation | Implement Client Script & UI Policy (Incident)

1. Purpose

The purpose of the UI Policies in this project is to enforce data completeness and control field behaviour on the Incident form according to the incident's State and Priority. They ensure agents capture required information at the right stage of the incident life cycle and protect completed records from accidental changes.

2. Goals

- Make the On hold reason field visible and mandatory when an incident is On Hold.
- Make the Assignment group mandatory for critical incidents.
- Make key fields read-only once an incident is Closed.
- Keep the form uncluttered by showing fields only when relevant.

3. Why UI Policies are Used

Reason	Explanation
No-code configuration	Mandatory, visible and read-only rules are set through simple actions
Automatic reversal	Behaviour is undone when the condition is no longer met
Consistency	Rules apply uniformly to every agent using the form
Maintainability	Administrators can change conditions without editing code

4. Benefits

UI Policies improve data quality, reduce errors, guide agents through the correct process and protect closed incident records, thereby increasing the reliability of reports and service metrics.
