

5.3 UI Policy Requirement

Phase 5 - UI Policy Implementation | Implement Client Script & UI Policy (Incident)

1. Requirement Statement

The Incident form shall change field behaviour dynamically: On hold reason shall be visible and mandatory when State is On Hold; Assignment group shall be mandatory when Priority is 1 - Critical; and Short description and Category shall be read-only when State is Closed. Behaviour shall be reversed when the condition no longer applies.

2. UI Policy Requirements

ID	Policy Name	Condition	Field Action
UP-01	Incident - On Hold reason	State is On Hold	On hold reason: Visible = true, Mandatory = true
UP-02	Incident - Critical assignment	Priority is 1 - Critical	Assignment group: Mandatory = true
UP-03	Incident - Closed read-only	State is Closed	Short description: Read-only = true; Category: Read-only = true

3. Common Settings

Setting	Value
Table	Incident [incident]
Global	true
Active	true
On load	true
Reverse if false	true

4. Acceptance Criteria

- Selecting On Hold displays On hold reason and prevents saving while it is empty.
- Selecting Priority 1 - Critical makes Assignment group show as mandatory.
- A Closed incident shows Short description and Category as read-only.
- Changing the condition back removes the applied behaviour.
