

8.1 Project Summary

Phase 8 - Conclusion and Future Enhancements | Implement Client Script & UI Policy (Incident)

1. Summary

The project **Implement Client Script & UI Policy (Incident)** successfully demonstrated client-side customization of the ServiceNow Incident form. A PDI was used to configure an onChange Client Script and UI Policies that make the form dynamic, guide the agent and enforce data completeness.

2. Project Components

Component	Description	Status
Requirement analysis	Functional, non-functional, script and policy requirements defined	Completed
Environment setup	PDI, Incident application, table and fields studied	Completed
Client Script	onChange script on Priority for critical incidents	Completed
UI Policies	Mandatory, visible and read-only behaviour rules	Completed
Integration and testing	Positive and negative scenarios validated	Completed

3. Key Outcome

The Incident form now warns agents about critical incidents, requires essential data at the correct stage and protects closed records. The work shows how Client Scripts and UI Policies complement each other to improve form usability and data quality within the ServiceNow platform.
