

8.2 Implementation Summary

Phase 8 - Conclusion and Future Enhancements | Implement Client Script & UI Policy (Incident)

1. Implementation Steps Summary

Step	Activity	Navigation / Result
1	Log in to the PDI as admin	Access to the ServiceNow instance
2	Study the Incident table and form	Incident > Create New; Tables: incident
3	Create the Client Script	System Definition > Client Scripts > New (onChange, Priority)
4	Write the script logic	Show message for Priority 1; clear otherwise
5	Create UI Policy UP-01	System UI > UI Policies > On hold reason actions
6	Create UI Policy UP-02	Assignment group mandatory when Priority is Critical
7	Create UI Policy UP-03	Short description and Category read-only when Closed
8	Validate on the Incident form	Positive and negative test scenarios executed

2. Configuration Summary

Item	Client Script	UI Policies
Table	Incident	Incident
Trigger	onChange of Priority	Conditions on State and Priority
Purpose	Guidance message	Mandatory, visible, read-only control
Count	1 script	3 policies

3. Remarks

All components were created using standard ServiceNow features in the Global scope. No external plugins or integrations were needed, which keeps the solution simple, portable and upgrade safe.
