

4.2 Purpose of the Client Script

Phase 4 - Client Script Implementation | Implement Client Script & UI Policy (Incident)

1. Purpose

The purpose of the Client Script in this project is to provide immediate, context-aware guidance to service desk agents on the Incident form. When an agent sets the incident to Priority 1 - Critical, the script displays a message that tells them the incident needs immediate attention and complete details. When Priority is lowered, the message is removed so the form stays clean.

2. Goals

- Alert the agent instantly when a critical incident is being recorded.
- Encourage the agent to assign the incident and describe it in detail.
- Avoid confusing the agent by clearing stale messages after Priority is changed.
- Demonstrate the working of an onChange Client Script in ServiceNow.

3. Why a Client Script is Used

Reason	Explanation
Instant feedback	Runs in the browser, so no save or page refresh is needed
Event based	onChange runs exactly when the Priority field is modified
Flexible logic	Custom messages and conditions can be written in JavaScript
Complementary	Adds messaging that a UI Policy alone cannot provide

4. Benefits to Users

The agent receives the right prompt at the right time, which reduces missed critical incidents, improves the completeness of incident records and supports faster response.
