

4.3 Client Script Requirement

Phase 4 - Client Script Implementation | Implement Client Script & UI Policy (Incident)

1. Requirement Statement

When the Priority of an incident is changed to 1 - Critical on the Incident form, the system shall display an information message to the agent. When the Priority is changed to any other value, the message shall be cleared. The script shall not execute during form load.

2. Detailed Requirements

ID	Requirement	Details
CS-01	Trigger on Priority change	Script type onChange, field: Priority
CS-02	Critical message	If newValue equals 1, show the info message on the form
CS-03	Clear message	If newValue is not 1, clear form messages
CS-04	Ignore form load	Exit if isLoading is true or newValue is empty
CS-05	Non-blocking	The script shall not stop the user from saving the record
CS-06	Table restriction	Script shall be applicable to the Incident table only

3. Input and Output

Item	Description
Input	Change in Priority field value (oldValue to newValue)
Processing	Client Script compares newValue with critical priority value '1'
Output	Information message displayed or cleared on the Incident form

4. Acceptance Criteria

- The message appears immediately after Priority is set to 1 - Critical.
- The message disappears when Priority is changed to 2, 3, 4 or 5.
- No message appears when an existing incident is simply opened.
