

2.2 Functional Requirements

Phase 2 - Requirement Analysis | Implement Client Script & UI Policy (Incident)

1. Functional Requirements

The following functional requirements describe the behaviour expected from the Client Script and UI Policies on the Incident form.

ID	Requirement	Priority
FR-01	The system shall run a Client Script when the Priority field value changes on the Incident form.	High
FR-02	The system shall display an information message when Priority is set to 1 - Critical.	High
FR-03	The system shall remove the critical message when Priority is changed to a non-critical value.	Medium
FR-04	The Client Script shall not run its logic while the form is still loading.	Medium
FR-05	When State is On Hold, the On hold reason field shall be visible and mandatory.	High
FR-06	When Priority is 1 - Critical, the Assignment group field shall be mandatory.	High
FR-07	When State is Closed, the Short description and Category fields shall be read-only.	Medium
FR-08	UI Policy behaviour shall be reversed when the condition is no longer true.	Medium
FR-09	The user shall be prevented from saving the form if a mandatory field is empty.	High
FR-10	All behaviour shall be applied on the Incident table [incident] only.	High
