

2.3 Non-Functional Requirements

Phase 2 - Requirement Analysis | Implement Client Script & UI Policy (Incident)

1. Non-Functional Requirements

Non-functional requirements describe the quality attributes of the solution. They ensure the customization is fast, reliable, maintainable and easy to use.

ID	Category	Requirement
NFR-01	Performance	Form behaviour changes shall be applied instantly, without noticeable delay or page reload.
NFR-02	Usability	Messages shall be short, clear and easy for the agent to understand.
NFR-03	Reliability	Client Script and UI Policies shall work consistently for every incident record.
NFR-04	Maintainability	Configuration shall use clear names and comments so that it can be modified easily.
NFR-05	Compatibility	The solution shall work in supported browsers such as Chrome, Edge and Firefox.
NFR-06	Security	Only users with admin role shall be able to create or modify the scripts and policies.
NFR-07	Upgrade safety	Only standard ServiceNow features shall be used so upgrades are not affected.
NFR-08	Scalability	The solution shall support additional conditions or fields in the future.
