

7.2 Functional Testing

Phase 7 - Testing and Results | Implement Client Script & UI Policy (Incident)

1. Functional Test Cases

Functional testing validates the end-to-end behaviour of the customization on the Incident form.

TC ID	Test Description	Expected Result	Status
TC-F01	Set Priority to 1 - Critical	Critical info message is displayed	Pass
TC-F02	Change Priority from 1 to 3	Critical message is cleared	Pass
TC-F03	Set State to On Hold	On hold reason is visible and mandatory	Pass
TC-F04	Change State from On Hold to In Progress	On hold reason is hidden and not mandatory	Pass
TC-F05	Set Priority to 1 - Critical	Assignment group is mandatory	Pass
TC-F06	Open a Closed incident	Short description and Category are read-only	Pass
TC-F07	Open an existing critical incident	No message is shown on form load	Pass
TC-F08	Save with all mandatory fields filled	Record is saved successfully	Pass

2. Observation

All functional test cases matched the expected results, showing that the configuration satisfies the functional requirements FR-01 to FR-10.
